YEAR:

2008

PROJECT:

SAAD Specialist Hospital Car Parking

DESCRIPTION:

SAAD Specialist Hospital is the leading private institution in KSA and is fast becoming recognised as a state-of-the-art medical site across the Gulf region and one of the first sites to reach JCIA International accreditation. This modern, 600-bed tertiary care medical facility located on an 80,000 sq metre campus includes two buildings: Saad Specialist Hospital (SSH) and Saad Specialist Hospital Clinic, and together they form a major regional resource for the Eastern Province, Saudi Arabia and the greater Arabian Gulf Region. Medical staffing in key positions requires Western qualifications, and both equipment and systems are completely integrated and automated, incorporating the latest in technology and healthcare delivery processes. Strategic affiliations with internationally recognized medical institutions and healthcare industry leaders provide vital support to SSH so it can implement the latest "best practices" in the medical industry. SSH puts in practice a "holistic approach" by adding value to discerning patients, and sets new standards for quality, comprehensive patient care.

The hospital's 41-floor parking project followed same meticulous strategic planning and quality approach. Sigma's comprehensive customer care, coupled with high quality products based on latest technology within the paint industry, convinced the discerning owners. Sigma's durable solution superseded the solutions offered by two major specialized flooring companies. While a car park never appears as a site of excellence, as part of a high-tech project it has to equally conform to high standards, and paint no doubt plays a prominent role.

OWNER:

Al-Sa'ad Hospital

LOCATION / COUNTRY:

Al Khobar - KSA

SIZE (Sqm):

 100,000 m²
CONTRACTOR:

Al-Sa'ad
