**YEAR:**

2008

**PROJECT:**

Al-Hazza Compound

**DESCRIPTION:**

Al Hazza compound differs from many other luxury compounds anywhere in the Gulf due to its uniqueness in courageous colour combination. Usually, a blend of beige and burgundy would be too strong for the wealthy and luxurious surroundings of the Golden Belt area in the Eastern District and for Saudi nationals. However, since the nuance and intensity of the applied paint colour was correct, it became eye catching and attractive. The residential compound which has eight buildings, each building with 12 flats it boasts modern recreational facilities, such as a big swimming pool, sauna, steam and gym.

The quality of exterior paint systems is particularly crucial when dealing with strong colors, not only in view of finding the right tone and hue that will stand the test of the sun, but also with regard to contributing to a greener and more sustainable environment. Some products commonly used within the paint industry contain VOC's (volatile organic compounds) and as such influence the level of atmospheric emissions and global warming. Sigma is a forerunner in developing environmentally friendly products, while possessing extensive colour expertise in line with its slogan 'Beyond Colours'.

**OWNER:**

Nasser Bin Hazza & Bros. Co.

**LOCATION / COUNTRY:**

Al Khobar - KSA

**SIZE (Sqm):**

50,000 m<sup>2</sup>
