

Highlights

YEAR:

2009

PROJECT:

Europa

DESCRIPTION:

March and April 09 were great months for PPG Coatings Italy. In fact there was the launch of the "Europa" at Fincantieri Castellamare di Stabia s/y. It was one of two ferries ordered from Fincantieri by Grimaldi Group Naples/ Minoan Lines.

With a gross weight of 55,000 tons and a loading capacity of 3,000 lines meters for trailers, the "Europa", and her sister cruise ships, "Roma" and "Barcelona", will be considered among the most innovative modern ships built for the sector.

We supplied the following Sigma Coatings products for these new projects:
15,000 liters of SigmaPrime 200 as one universal anticorrosive system.
6,000 liters of Sigma AlphaGen 650 antifouling system for 8.000 sqm of hull.
4,000 liters of SigmaDur 550 for about 15.000 sqm of topside and external superstructures.
10,000 liters of SigmaGuard 240/440 system for the ballast tanks.
