Highlights

YEAR:

2003

PROJECT:

Taiz University

DESCRIPTION:

The development of Hadramouth University and Taiz University was overviewed by the UN. Their aim was to establish faculties in Science and Technology in the relevant academic disciplines that prepare students for careers in areas which generate wealth, and guide them towards independent thinking and creative reasoning. They also wanted to build motivation towards entrepreneurship, consequently contributing to building new industries, and eventually gaining a stronger economy in Yemen.

Taiz was successfully completed in 2003. The Engineering College, which was also established in 2003, is affiliated with Taiz University. Its first building has four floors, while the second has two. The College's five departments convey Yemen's need for growth and development. Sigma supported these honourable projects and is proud to support Yemen's future educational developments by providing the highest level of technical assistance and paint solutions.

OWNER:

Ministry of High Education & Scientific Research

LOCATION / COUNTRY:

Taiz- R.O. YEMEN

SIZE (Sqm):

45,000 m²

CONTRACTOR:
